Added in API level 3

ParcelableSpan

implements [Parcelable](#)

android.text.ParcelableSpan

▼ Known Indirect Subclasses

AbsoluteSizeSpan

AlignmentSpan.Standard

Annotation

Annotations are simple key-value pairs that are preserved across TextView save/restore cycles and can be used to keep application-specific data that needs to be maintained for regions of text.

BackgroundColorSpan

BulletSpan

EasyEditSpan

Provides an easy way to edit a portion of text.

ForegroundColorSpan

LeadingMarginSpan.Standard

The standard implementation of LeadingMarginSpan, which adjusts the margin but does not do any rendering.

LocaleSpan

Changes the Locale of the text to which the span is attached.

QuoteSpan

RelativeSizeSpan

ScaleXSpan

StrikethroughSpan

StyleSpan

Describes a style in a span.

SubscriptSpan

SuggestionSpan

Holds suggestion candidates for the text enclosed in this span.

SuperscriptSpan

TextAppearanceSpan

Sets the text color, size, style, and typeface to match a TextAppearance resource.

TypefaceSpan

Changes the typeface family of the text to which the span is attached.

URLSpan

UnderlineSpan

Class Overview

A special kind of Parcelable for objects that will serve as text spans. This can only be used by code in the framework; it is not intended for applications to implement their own Parcelable spans.

Summary

Inherited Constants [\[Expand\]](#)

- From interface android.os.Parcelable

Public Methods

abstract int `getSpanTypeId()`
Return a special type identifier for this span class.

Inherited Methods [\[Expand\]](#)

- From interface android.os.Parcelable

Public Methods

public abstract int **getSpanTypeId()** Added in [API level 3](#)

Return a special type identifier for this span class.
